

Azpen A701 Speaker Replacement

This guide shows how to replace the speaker in the Azpen A701 Tablet.

Written By: Grant Harding

INTRODUCTION

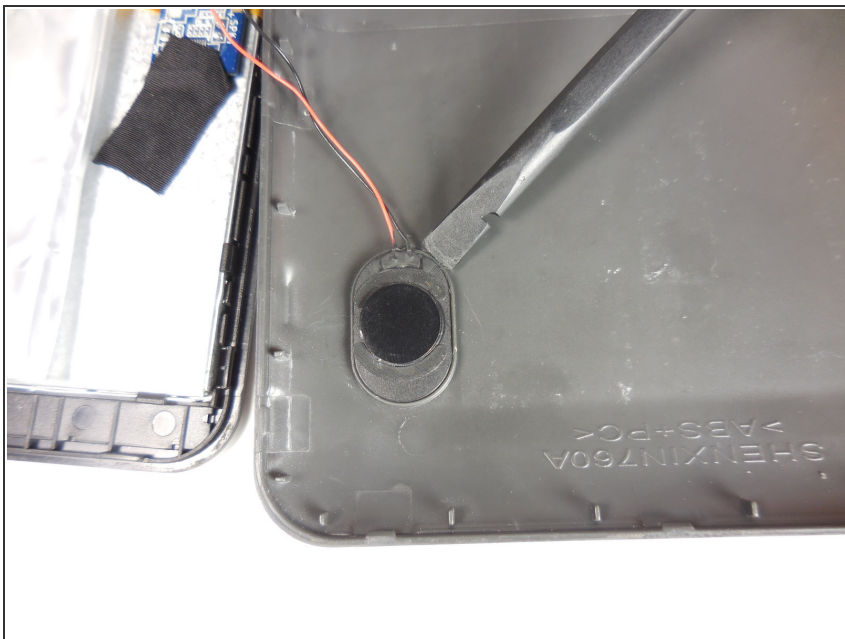

Replacing the speaker requires the use of a soldering kit. A guide to soldering is available on iFixit's website [here](#).

TOOLS:

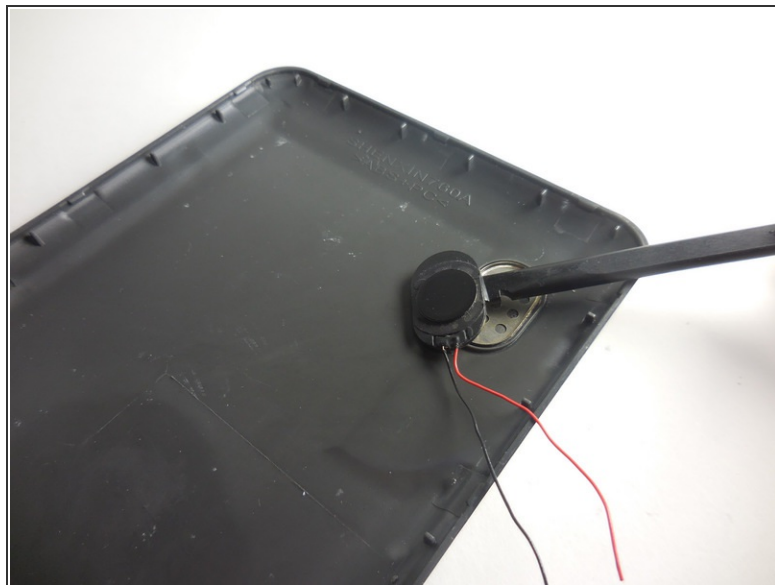

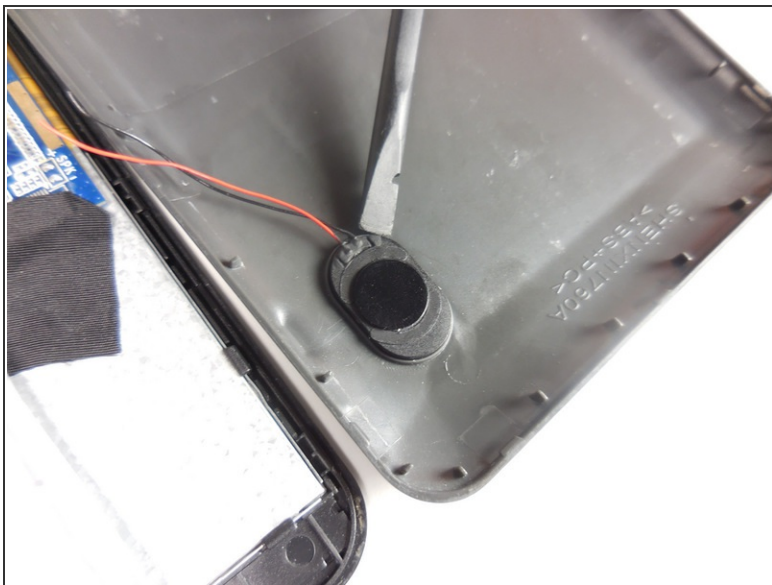

- [Soldering Workstation](#) (1)
 - [Phillips #00 Screwdriver](#) (1)
 - [Spudger](#) (1)
-

Step 1 — Speaker

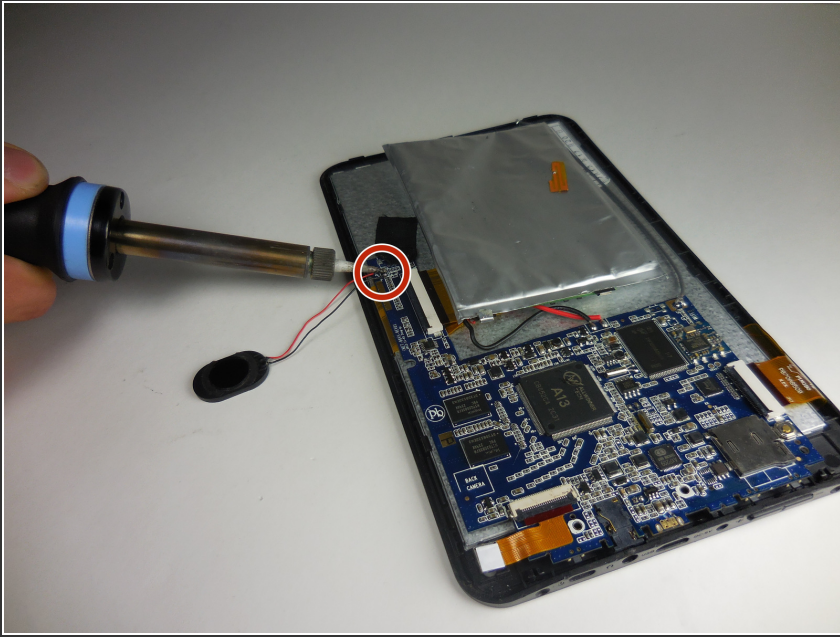

- Wedge plastic spudger in between the back panel and the speaker of the device.

Step 2

- Gently pry out the speaker from the back panel using the plastic spudger.

Step 3

- Heat solder and apply to the wires where they attach to the motherboard. This will disconnect the wires from the motherboard.
- ⓘ The wires should still be attached to the speaker.

Step 4

- Take the speaker and wires that are attached out of the device and insert a new speaker by soldering the wires to the motherboard.

To reassemble your device, snap back piece back on to device and secure both 2cm screws at the bottom.
